🚀 Just discovered a game-changer in robotic surgery: a robot trained by watching videos of surgeons has now autonomously performed a complex phase of gallbladder removal — 17 separate tasks, voice-command capable, adapting to unexpected scenarios — with 100% success.

What really grabs me: this isn't just automation of fixed tasks. The robot responds like a surgical resident — adapting to variations, handling surprises, and working toward full procedure autonomy. The Hub+1 As someone passionate about AI/ML and human-robot collaboration, this feels deeply relevant: the kinds of precision, adaptability, and trust we build now set the foundation for future surgical ...more

I'm happy to share that I've started my Bachelor's degree at [University of Windsor](#)!

Celebrating an Educational Milestone

Report:

When I first made my LinkedIn profile, I didn't understand it at all. I just thought it was a website where you put your resume online. I created a basic profile with my name and school, and then I pretty much forgot about it. I didn't log in again for a long time.

Everything changed when I saw my friends getting messages from recruiters and even landing internships through the site. I realized I was missing out on a big opportunity. So, I decided to start using it for real.

The first thing I did was update my profile. I added all my skills, my volunteer work, and details about my projects. Then, I did something that felt scary: I started posting. I shared my thoughts on new technology and talked about what I was learning in my classes. I was nervous that no one would care, but I was wrong. People started to like my posts and leave comments. This helped me connect with other students, teachers, and people who worked at companies I liked. Some of them even sent me helpful advice.

My biggest challenge was feeling shy. I was afraid to send connection requests to people I didn't know. I thought they would ignore me or think I was strange. I got over this fear by writing a nice, short note with every request. I would say something like, "Hi, I saw your post and I really liked it," or "I'm a student who is interested in your field." Most people were very friendly and happy to connect with me.

Another challenge was figuring out what to post. I didn't want to sound too formal and boring. I learned by looking at what other people were doing. I saw which posts got a lot of attention and tried to find my own style that was both professional and friendly.

Now I see that LinkedIn isn't just for finding a job. It's a place to learn, share ideas, and meet people who can help you grow. It makes me feel more confident and connected to my future career.

My plan is to keep using it regularly. I will keep sharing my progress and connecting with new people. I know my posts might only get a few likes at first, and that's okay. I believe that if I am consistent and genuine, it will help me find amazing opportunities in the future. It's become my most important tool for building my career.
